

**Participant NW8**

**This is participant NW8 on the 29<sup>th</sup> March 2019. Could you just tell me how you were feeling as you were preparing that dose?**

Well I was feeling a bit nervous, just because I knew that I was in a trial

**Of course**

But yeah just a little bit nervous but nothing really out of control.

**Ok and how long have you been working so far today?**

Today?

**Just today**

Since 7 o'clock, so for a good

**So about 4 o'clock now so a good. Yeah ok so**

9 hours in total.

**Something like that, it's a long day**

It's a long day.

**And when you were doing that was there anything that distracted you from thinking about making up a dose?**

Umm I think it was the fact that I knew it was not a really patient, it was not a real situation that really upsets my mind.

**Ok that is interesting**

I don't know why because I kept saying to myself "ok just pretend that you have a real patient" but obviously it is not the case so.

**So there was a difference between what I saw and what I was expecting to see on one thing and because you set the pump to give it over an hour didn't you**

Yeah

**And we talked a little bit about that. I was expecting that to be for two hours and the reason for that is that, just pick up this, although it says in the guide to give over one to three hours it also gives a maximum rate of 3 milligrams per kilogram per hour**

Oh ok

**And for your patient that worked out at 2 hours. So I just wondered if you can talk through when you were deciding how long to give it over, what sort of mental steps you went through to make that decision.**

So first of all I think it was umm the matter of double checking with a nurse that I didn't have it here, that really makes a difference

**Definitely**

But then yes I think it was quick, I just went to the number and just seen that it was between an hour and three hours and I thought if I can give it through an hour or so

**So do you think you saw the bit at the end of the sentence or not?**

I think I saw this and then I just went down just to see how I could give it

**That is interesting so, for the last question then I think is how do you think that sort of mistake could be prevented in the future?**

Maybe by making it clearer so I don't know, because if it says here you can give it between an hour and three hours so maybe I don't know maybe put the mls an hour in here or yeah I think yeah that would make it really easy

**If we look at the other version, Guide Y, it hasn't printed very well unfortunately it is over the page, but what you have is, it gives you a link to a table which will give you the weight and the dose, or it gives you this equation to calculate it with. I didn't know if you had any thoughts on those approaches?**

Oh that would be really helpful like if it is a table there and it is really quick just to calculate to see if we are putting 100 mls to 150 mls or 500 mls then how or depending on the dose as well, so I think will make it easier.

**Ok good well thank you very much, that is very interesting.**
