

Participant PU6

This is participant PU6 and the date is the 2nd May 2019. So when you were making up that dose how were you feeling as you were doing that?

Umm I was feeling a little bit anxious, I think it was just because when you are put on the spot you feel a bit anxious.

Yes, yes. And how long have you been at work today?

Since seven thirty this morning.

Seven thirty so it is now three thirty ok. And then were there any other distractions going on while you were preparing that dose?

Yes, I was called away to check another drug.

Ok, and you spotted yourself that the dose would ideally have been diluted over 2 hours rather than given neat, so when you were making the decision to give it as a neat injection can you kind of talk through the thought process that you followed as you were making that decision?

Umm I just followed the Medusa down, did the calculation umm and just when I was giving it I was thinking "I don't know how fast I should be giving it" and then I realised that I hadn't actually got down to the end of the page and I think as I was giving it I just felt like something was wrong here

So not reading on beyond a certain point? And why do you think it was that you didn't read on?

I think it was because normally you have paper, normally get a paper copy so you can read down the whole of the page and obviously not seen it on a laptop screen.

Yes ok, so if we were to make changes, how might we prevent that in future?

Well I don't know whether we are meant to, but we usually print all of the pages off that we use regularly but I can understand that things could change so they might not always be up to date but that is how we usually do it

Ok and the printed copies are easier to use?

I find it, it might be to do with my age

Why do you think they are easier to use?

You have just got the whole thing in front of you and you read all the way down. I mean stupidly I didn't take it all the way down, I think if it is in front of you, it's in front of you isn't it?

Ok great thank you very much.
